by SPRAYING!

*We use the latest equipment, insecticides, chemicals and methods.
All work guaranteed and all methods proven by experience.*

Service No. 1—

Fruit Tree Spray

One of our specialties. We recommend two sprays for the average home orchard, DORMANT spray before April 15 and CALYX spray as the petals fall. This will give approximately 60 to 80% clean fruit varying with the season. For larger orchards where commercial value of fruit is important one or more cover sprays are recommended.

*Prices 25c to \$1.00 per tree per spray
Depending on the size and number*

Service No. 2—**IMPORTANT..Crop Spray**

Oats, Barley, Wheat

This is something of major importance to the farmer. With the use of SELECTIVE WEED KILLERS weeds such as mustard, docks, bindweed, thistles, etc., can be controlled without injury to the crop or yield. Thereby giving increased yield and clean seed. It is a known fact weeds account for 25% of a crop in reduced fertilization and crowding out of crop plants. This service is of particular importance to certified seed growers.

THE TIME TO SPRAY IS BEFORE THE PLANTS REACH THE HEIGHT OF 6 INCHES. Using a 30 ft. boom we are able to do the job quickly and efficiently. (Note: Crops seeded to legumes cannot be sprayed due to sterilization of the seed.)

Charges \$5.50 per acre

CORN can be sprayed for weeds and corn borer. Inquire for further information. We also spray PEAS, ASPARAGUS, etc.

Service No. 3—

Weeds in Lawns, Fence Rows, etc.

LAWNS—Results with 2-4-D in lawns has been phenomenal. Dandelion, plantain, buckhorn and other lawn weeds disappear as if by magic with no harm to the grass. WE HIGHLY RECOMMEND THIS SERVICE. Compared to the hours spent digging these pests by hand the results are economical and a great deal more satisfactory. Time to spray, June 1 to October 1.

*Prices \$1.50 to \$2.50 per 1000 sq. ft.
depending on size of lawn*

WEEDS IN GENERAL — Results in fence row spraying have been very satisfactory. IMPORTANT: Spray before weeds attain a height of 18 inches.

Prices 30c per gallon of spray applied

At the present time we cannot recommend a one-spray kill for THISTLES. Results have proven one spray kills all of the thistle above the ground and about 40% of the roots. To the best of our knowledge three sprays should prove satisfactory.

Bindweed control has proven very satisfactory. A high percentage of kill can be obtained with one application.

Service No. 4—

Livestock Spraying

High pressure spray is the atomic age weapon to fight cattle grubs, horn flies, fleas, lice, ticks, beetles, mosquitoes, and other pests that have plagued livestock for generations. Now you can control these pests with modern insecticides applied with a high pressure sprayer.

CATTLE GRUBS cost the nation \$100,000,000 annually in loss of leather, meat, and milk. An expensive nuisance paid for by the farmers. Control of cattle grubs is practicable with a high pressure spray that drives insecticides through dirt and matted hair to penetrable grub holes in the hide.

BEEF CATTLE cannot make the best gains on summer pasture when tormented by swarms of flies. The same cattle sprayed with modern insecticides can make extra gains per animal of one-half pound or more a day. Cattle fattening in feed lots, will gain much faster if flies are eliminated with a high pressure spray. The job is done quickly and economically on the range or in the feed lot.

Service No. 5—

DDT Spray in Cow Barns

Dairy cattle produce up to 20% more milk, reliable tests show, when a spray program is carried out on the farm. Contented cows, free from flies, add profits to your milk check. THIS SPRAY is a specialty with us. Last season we achieved remarkable control of flies with one well applied spray. Our recommendation is two sprays; the first early in June and the second in August. This spray also controls spiders, thus eliminating cobwebs. Dairymen cannot afford to be without this service from a standpoint of comfort to the farmer while milking, increase in milk production and health of his herd.

Prices \$3.00 per 1000 sq. ft.

Service No. 6—

Evergreen Spray

Experts on diseases of evergreens. Evergreens need a thorough spray once every season to keep them free from scales and red spider. If your evergreens lose their lustre in the hot summer months the possibilities are they are diseased. Call us to investigate. Time to spray, around July 1.

Service No. 7—

Shade Tree Spray

We are equipped to cope with all shade tree insects and diseases. Our equipment will spray to the top of an 80 ft. tree from the ground.

Service No. 8—

Poison Ivy and Woody Growth Eradication

Using a special spray we are able to kill poison ivy and shrubby growth with one spray.
